Summary

Applied AI engineer with 9+ years building data products and enterprise platforms, now designing and shipping **production LLM agents end to end**. I start from the operational problem: I work with operators and domain experts, find the highest-leverage workflow, design the agent and its harness, and ship it to the people who use it. Fluent in agent patterns, RAG, prompt engineering, tool use (MCP) and evaluation. I build full-stack in **TypeScript**, **Next.js** and the **Vercel AI SDK**, and in **Python**, on Anthropic, OpenAI and Google AI APIs, with a production focus on observability, reliability and token cost. Published at ACM CAIS '26; ACM Professional Member.

Core skills: AI Agents | Agent Harness Engineering | LLM Applications | RAG | Tool Use / MCP | LLM Evaluation | TypeScript | Next.js | Vercel AI SDK | Python | PostgreSQL | Full-Stack | Product Ownership

Experience

Senior Applied AI

Kariyer.net (ilab group) | Mar 2025 – Present

- Own agentic systems from problem to production: scope with operators and stakeholders, then design, build and hand off LangGraph / MCP / Agno workflows with custom routing, safety fallbacks and real-time observability (Arize).
- Build agent applications and harnesses in **TypeScript** (Next.js, Vercel AI SDK) and Python: tool loops, context management, sub-agents, hooks and guardrails. My token-efficient context-engineering framework became the organisational standard, lowering token spend while improving factual accuracy.
- **Finance exception detection:** LLM pipeline that reads POS commission statements from 4 major Turkish banks, compares contracted vs. applied rates and surfaces discrepancies to the finance team.
- **ProjectLens:** operator-facing internal pricing tool that replaced a quote-per-Excel-file workflow, cutting **91%** of the manual effort and retiring 31 spreadsheets.
- **Text-to-Report:** natural-language-to-SQL agents with RAG over a DataHub metadata layer, cutting the analytics backlog by **40%**.
- Feedback automation for 100+ internal users (**–60%** manual workload). Secured a USD 40K Perplexity enterprise grant. Set evaluation baselines for agentic infrastructure.
- Teach Applied AI courses on agents, MCP and AI-native development (18-hour programme); AI Career Mentor at TEV.

Product Manager – Data

Kariyer.net | Oct 2022 – Mar 2025

- Designed metadata schemas for **300M+** text and numerical data assets, aligning product roadmaps with engineering.
- Built real-time analytics pipelines for labour statistics, with data-quality matrices, governance and executive dashboards.
- Led AI adoption training for C-level executives.

Business Analyst – Data Analytics

WorqCompany | Sep 2021 – Oct 2022

- Built financial forecasts and revenue simulations that leadership used for mid-range planning.

People Data (Co-Founder)

Defaro.io | 2019 – 2021

- Labour-market compensation analytics startup; incubated and backed by Özyeğin University.

Selected Projects

Multi-Agent Position Classification

ACM CAIS '26

Confidence-gated multi-agent system on MCP that normalises free-form job titles in five languages to O*NET / ESCO. **72.5%** less classification time (4.0 to 1.1 min per position), up to 95% segment-level accuracy.

Keywords: Next.js, MCP, Vercel AI SDK, Anthropic SDK, Multi-Agent, Hooks

Tokalator: Context Engineering Toolkit (Open Source) 500+ installs
VS Code extension and web platform for real-time token budgeting and context optimisation for AI coding assistants; supports 17 models with a PostgreSQL-backed usage tracker. [Marketplace](#) | [tokalator.wiki](#)
Keywords: TypeScript, Next.js, VS Code Extension, Token Economics

Enterprise AI Transformation (Sales, Finance & R&D)
Delivered AI initiatives across several business units, using agentic workflows for sales reporting, financial analytics and R&D automation. Covered PoC design, MLOps-ready APIs, security reviews and production hand-off.
Keywords: FastAPI, Agno, Pydantic, Azure, GCP

Job Matching & Workforce Canvas Graphs
AI-assisted matching pipelines for workforce programmes, plus node-graph canvas components for tracking position clusters across geographic and departmental variables.
Keywords: Claude Code, Python, Node-Graph Analytics

Weekend Advisor – Baachee.ai (Agent AI Studio)
Advise on rapid-deployment agent frameworks: tool integration, text-to-SQL parsers and node-graph canvas flows.
Keywords: Agent Architecture, Framework Design, Protocol Integration

Technical Skills

Agents & Harness: agent harness engineering, MCP server/client design, LangGraph, Agno, multi-agent orchestration, tool use, guardrails
LLM Engineering: RAG, context engineering, token budgeting, prompt composition, evaluation & benchmarking, Arize observability
Full-Stack: TypeScript, Next.js, Vercel AI SDK & Vercel, Python (async, FastAPI, Pydantic), SQL, REST APIs
Product & Delivery: problem discovery with operators, stakeholder alignment, PoC-to-production, internal & operator-facing tools
Models & Data: Anthropic, OpenAI / Azure Foundry, Vertex AI; PostgreSQL / pgvector, BigQuery, Azure Synapse, DataHub, Docker

Talks & Community

Context Engineering for AI-Native Dev, Only Builders Club	2026
Deep Agent Frameworks for SaaS, Bridge Summit '25	2025
Enterprise Prompt Engineering and Tool Design, Kayseri University & Van University	2025
Trainer, Applied AI Course: Agents, MCP and AI-Native Development (18 hours)	2026
AI Career Mentor, TEV (Turkish Education Foundation)	2026

Education & Additional

M.A. in Economics Ibn Haldun University | 2019 – 2023
Thesis: *Real-Time Labor Market Analysis: A Data-Driven Approach*
Teaching Assistant, Econometrics I; Research Fellowship in labour-market analytics
Memberships: ACM Professional Member **Patents:** 1 pending
Certifications: Anthropic Claude Certified Architect, Google GenAI Leader
Languages: English (C1), Turkish (Native), Spanish (Instructor Level), Portuguese (Basic)
